

Regional Resilience Framework:

A Process for Building Multi-Scale, Multi-Hazard Resilience Action

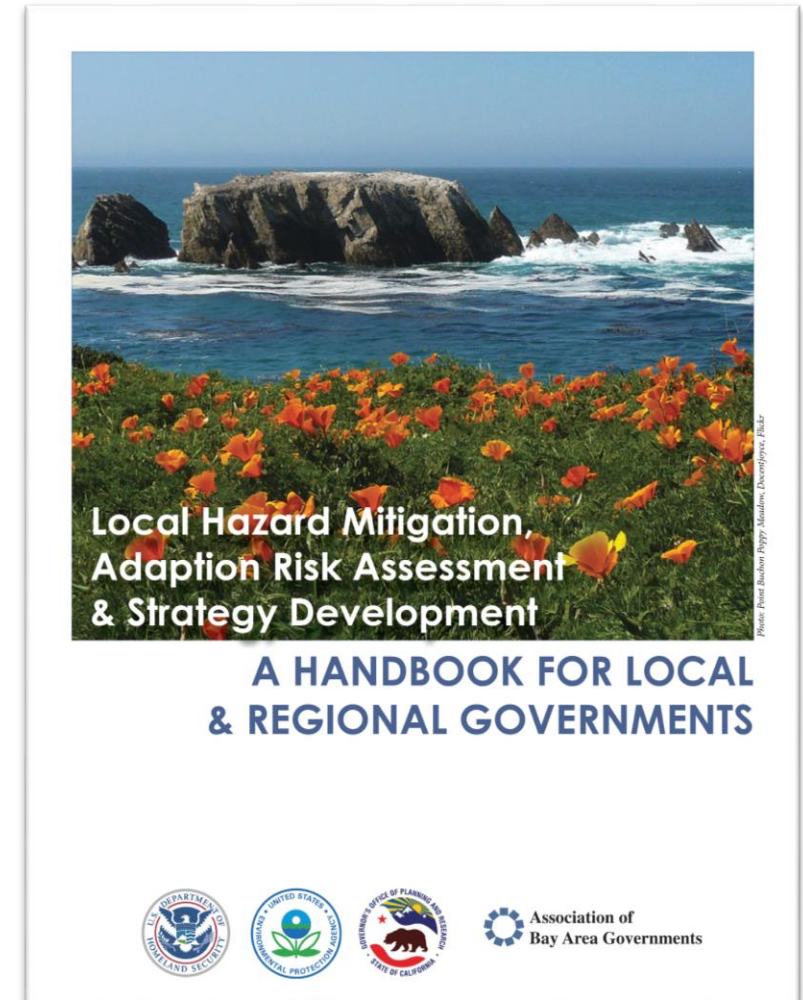

PARTNERS

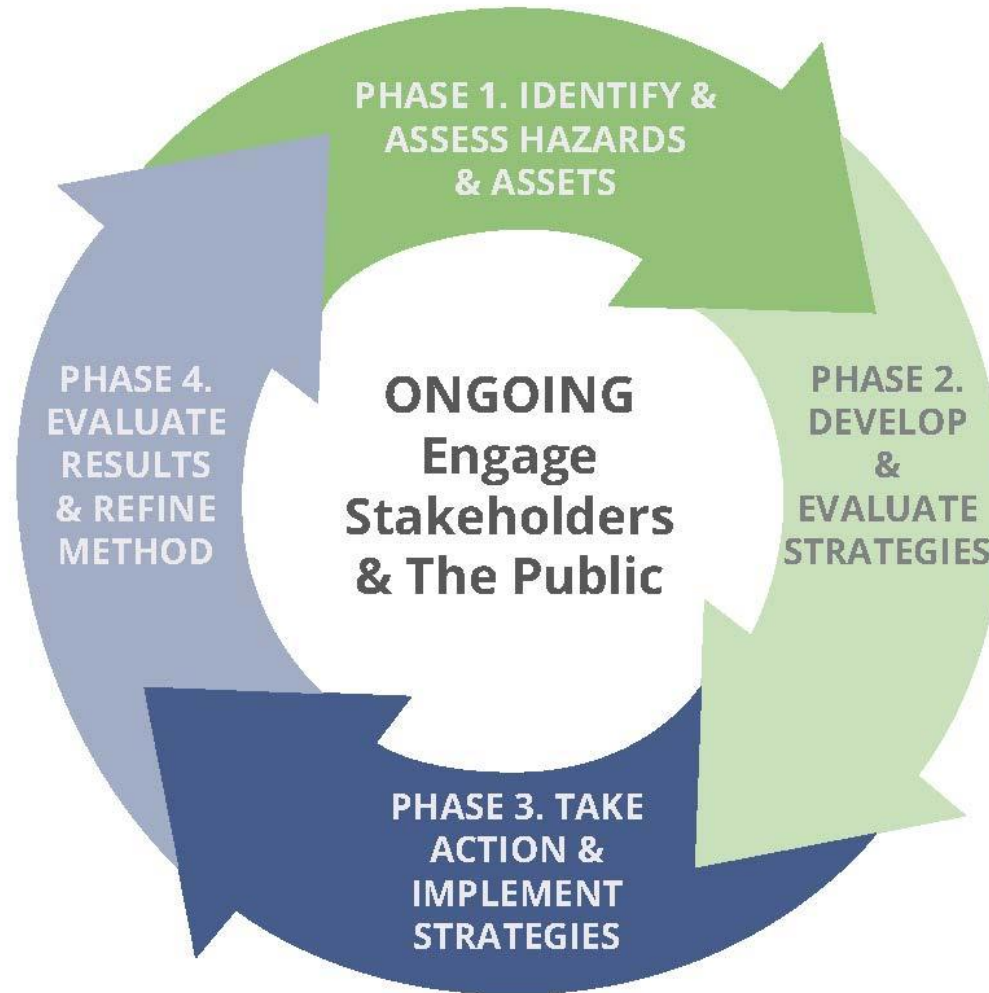

Association of
Bay Area Governments

Regional Resilience Framework Concept

- Outcome- and values-driven
- Iterative, inquiry-based, scalable process
- Build vision, capacity, relationships, technical knowledge, and action throughout the process
- Replicable and applicable
- Replaces need for multiple siloed plans

Overall Process

Engage Stakeholders and the Public

- Collaborative, built on trust and buy in
- Engage community on their issues
- Build partnerships across diverse stakeholder groups and jurisdictions
- Increase support for resilience and community capacity on decision making
- Piggyback on existing successes from other sectors

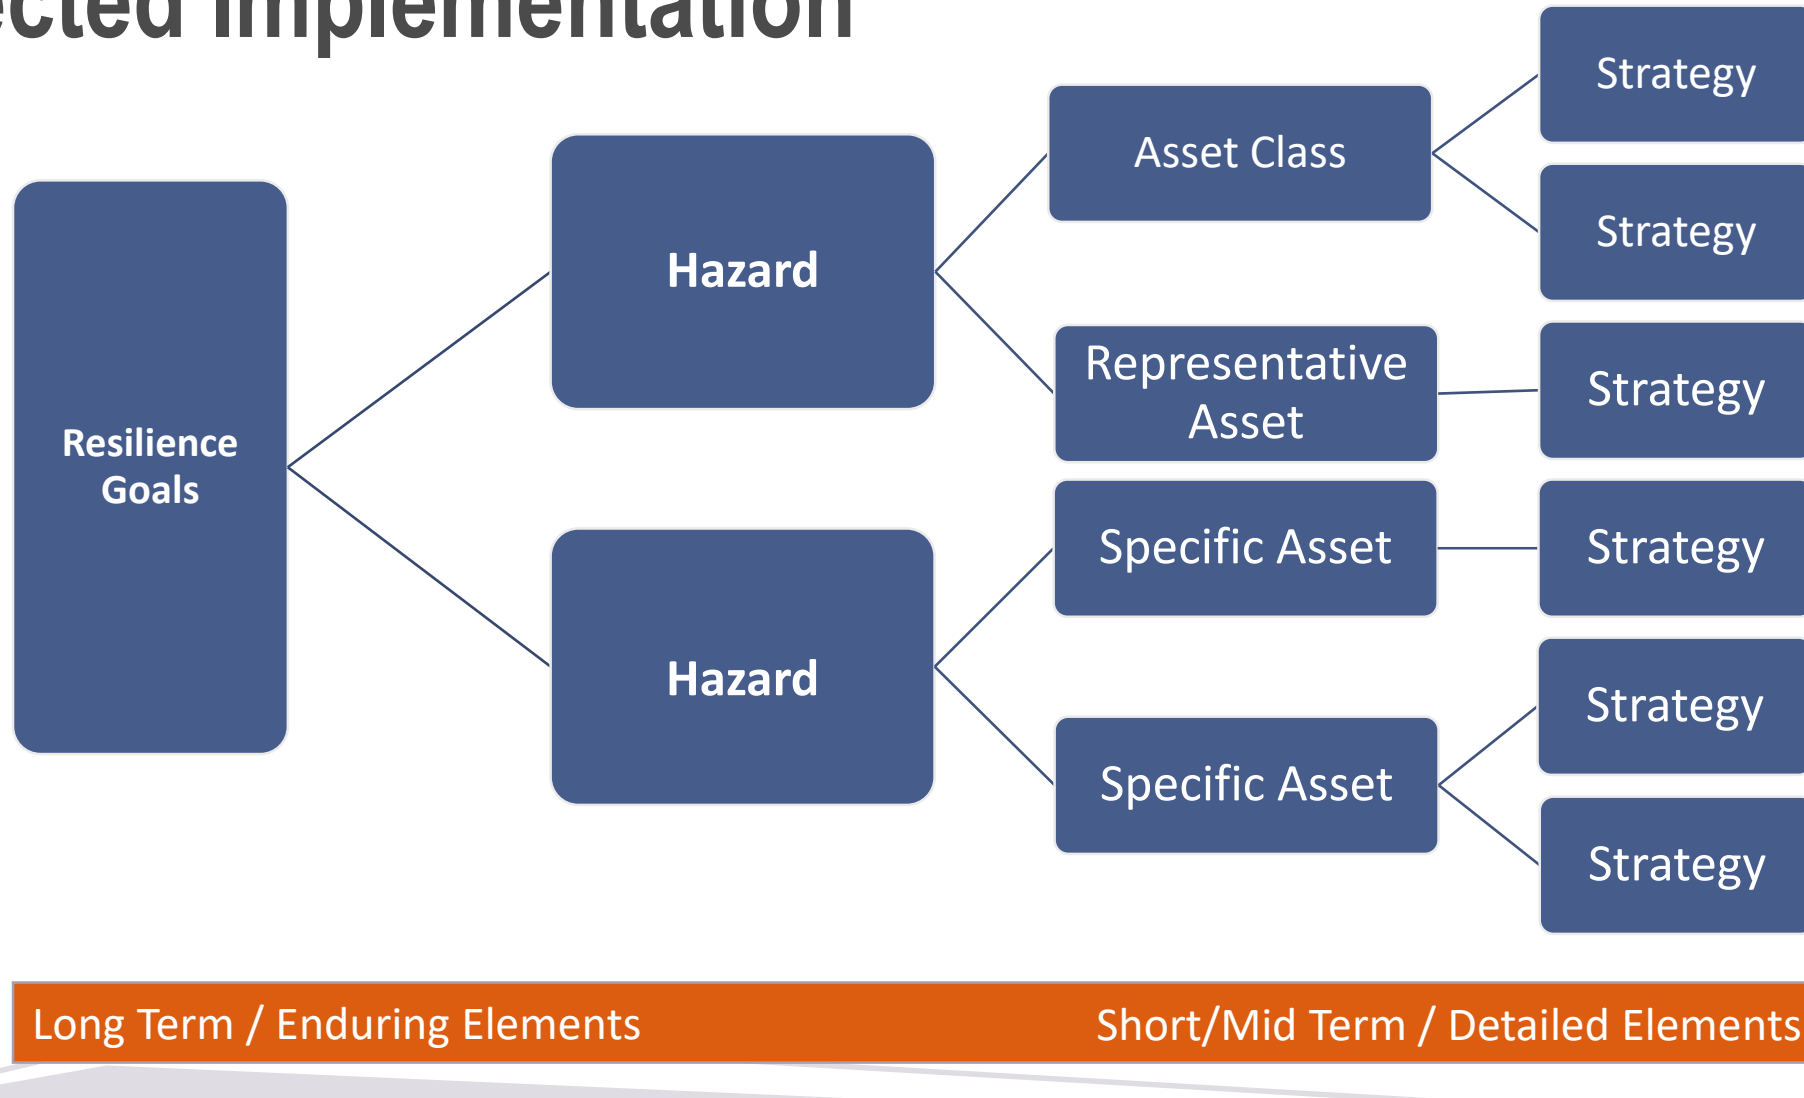

Vulnerability Assessment Process

Phase I. Identify and Assess Hazards and Assets

Phase II. Develop and Implement Strategies

Connected Implementation

Measuring Progress: Choosing Metrics

- Qualitative vs. quantitative
- Availability of resources to track and manage data
- Matching metrics to needs
- Produce data for accountability, guiding action, telling a story, and measuring success
- Ensure metrics are versatile and adaptable
- Consider scale
